TEASEL is an extract produced from the root of *Dipsacus fullonum*, a wild flowering plant found in moderate climates around the world. It is known as a common adjunct to fighting chronic Lyme Disease and has many other medicinal properties. TEASEL increases circulation and pulls toxins (including bacteria and fungi) from the tissues of the body, which allows anti-microbial agents to destroy the pathogens. The diuretic properties of TEASEL support the liver to rid the body of liver toxicity. It will also assist in detoxifying the body in the event of a Herxheimer reaction.

Put 1 to 30 drops in 4oz of water and wait one minute before drinking. Start with 1 drop twice daily (30 minutes before meals) increasing slowly up to 30 drops twice daily or as directed by your physician.
