

VITAMIN D₃ & K₂

May promote healthy bones, teeth, and arteries

REINFORCE YOUR BODY†

Striking the right balance with vitamins is crucial for maintaining healthy bodily functions. Vitamin D may promote calcium and phosphorus absorption, while Vitamin K plays an important role in bone formation and cardiovascular health. The synergistic effect of Vitamins D₃ & K₂ may assist the proper absorption of calcium and its integration into bone mass.

Recent studies also indicate that Vitamin D may support the maintenance of normal glucose levels, in addition to promoting a healthy metabolism and immune system. It also may contribute to emotional well-being. Although our bodies naturally produce Vitamin D through sunlight exposure, proper supplementation can assist those who live and work indoors, or who live in northern climates.

Vitamin K, meanwhile, is critical in the formation of a strong bone matrix, as well as supporting proper calcium metabolism in vascular structures. Vitamin K₂, specifically in this MK-7 subtype, is a readily active and biologically available form of Vitamin K.

These easy-to-swallow capsules make a great addition to your daily supplement program.

HOW TO USE

Keep the bottle tightly closed in a dry place at room temperature (59-86°F or 15-30°C). With clean hands, unscrew the bottle's lid and take out capsules. Place each capsule on tongue and wash down with a glass of water. The standard serving size is 1 capsule.

SUGGESTED USE

For skeletal and cardiovascular support, take one capsule daily after a meal, or as directed by your physician, whom you should consult if you are taking any anti-coagulants, such as Coumadin (warfarin). Do not use if pregnant or nursing. Discontinue use if adverse reactions develop.

CONTAINS NATURALLY SOURCED INGREDIENTS

DAIRY

SOY

GLUTEN

SUGAR

YEAST

MOLD
