

ALGAS METAL DETOX

ALGAS- METAL DETOX is produced from an extract of *Gigartina chamissoi*, a red algae collected in the Pacific Ocean off the Peruvian coast. It has been used for decades in Peru as a detoxification aid. Nutramedix utilizes a proprietary extraction and enhancement process that makes this product far more effective than any other *Gigartina chamissoi* product available.

Primary Use of ALGAS:

- HEAVY METAL DETOXIFICATION

Practitioners that have used the product report that it helps to very effectively mobilize heavy metals out of the body. Doctors using it theorize that it is mobilizing the heavy metals out of the interior of the cells since many of the patients that are taking ALGAS had previously gone through an extensive heavy metal chelation protocol to the point where there were no more metals coming out. When the ALGAS was added more metals began to come out of the body.

ALGAS- METAL DETOX has been found by practitioners to be particularly effective for removing the following metals from the body:

- MERCURY
- ALUMINUM
- CADMIUM
- ARSENIC
- NICKEL
- LEAD
- INDIUM
- RADIUM
