

# EZOV

## EMOTIONAL BALANCE

Ezov is an extract produced from the flowers of *Hyssop officinalis*, commonly known as Hyssop. Nutramedix utilizes a proprietary extraction and enhancement process that makes this product far more effective than any other Hyssop product available.

Ezov is primarily used to help the patient resolve subconscious (suppressed) emotions that may affect his /her health.

Many health care professionals believe that there are 4 major groups of toxins that can contribute to chronic or degenerative disease- 1- microbes- parasites, bacterium, fungi and viruses, etc., 2) heavy metals- mercury, aluminum, arsenic, cadmium, etc, 3) environmental toxins- pesticides, herbicides, solvents, etc., and 4) emotions- fear, grief, anger, etc. Many doctors also believe that emotions (especially subconscious) cause the patient to more avidly hold onto heavy metals and other toxins.

A significant number of potentially harmful subconscious (suppressed) emotions can accumulate over time. Most of the emotions that affect our health originate before the age of 6 since it is difficult or even impossible for a child to process most traumatic or deep emotional events. Some suppressed emotions can contribute to a medical condition immediately. For example, a 3 year old boy is eating breakfast and sees his father hit his mother. It is very possible that this traumatic event will cause the child to develop an allergy to many of the foods that he was eating at that moment, ie. eggs, wheat, cow dairy, etc. Many health care professionals believe that subconscious emotions can also negatively affect our health many years after the emotions are suppressed. Most also believe that it is the most difficult contributor to illness to treat.

A physician in Pennsylvania in the U.S. reports that many of his patients using Ezov have complete resolution of food allergies. Another physician in California, U.S. reports that his patient suffering from Irritable bowel syndrome for 15 years has been asymptomatic since the first dose of Ezov.

Ezov is best taken at bedtime starting with only one drop and adding another drop every 2 to 7 days up to 8 drops for adults.
