

TRACE MINERALS RELAX

This Trace Mineral combination is harvested from very pure underground stores in Asia and the Americas. It is combined with Fulvic Acid to complex it and make it highly absorbable unlike many of the other trace mineral products on the market that are in an inorganic form and not utilized by the body.

Primary Uses of TRACE MINERALS- RELAX:

- TO RESTORE DEPLETED MINERALS STORES IN THE BODY
- HELPS CORRECT TISSUE ACIDITY
- TO AID IN RELAXATION
- RESOLVE THE HARMFUL EFFECTS OF SCARS (when applied to scar)

Most individuals in the United States and many other countries are mineral deficient because of the wasting of minerals through the kidneys into the toilet when the person is under stress, consuming alcohol, drinking caffeinated beverages or using certain pharmaceuticals. Patients are also mineral depleted because they have a diet that has very poor mineral content. The content of minerals in foods has diminished dramatically in countries like the United States where most of the food that is sold in grocery stores is grown on corporate farms with the same crop being grown in the same ground for decades without ever adding any minerals back into the soil. The result is that foods that are grown in that soil are mineral depleted; the U.S. government estimates that there had been approximately a 70% mineral depletion from the soil between 1935 and 1965 and more loss since then.

We know that the enzymes in the body do not work well unless there are sufficient minerals. The minerals act like spark plugs so that the enzymes will work properly; if the enzymes are not working properly then the cells cannot produce energy or perform many of the essential functions that are required for life. We also know that the antimicrobial ability in the body depends on sufficient minerals to power the immune defenses; therefore, many people have susceptibility to infection because of mineral depletion.

There are more than 70 essential minerals in the product with high enough levels of most of those to have a significant benefit on health with a very small daily dose. TRACE MINERALS- RELAX contains no significant levels of toxic metals like mercury, lead and arsenic that are found in many other trace minerals products on the market.

The minerals also act as a carrier for energies that have been infused into the product that help to calm and sedate the nervous system without causing a drugged or hangover feeling.
